

# Body Talk User Studies

Vinod Ramesh, Amber Horvath, Griffin Gonsalves

Fig. 1. In the Clouds: Vancouver from Cypress Mountain. Note that the teaser may not be wider than the abstract block.

**Abstract**—OUR ABSTRACT.

**Index Terms**—Radiosity, global illumination, constant time

## 1 INTRODUCTION

Body talk introduction

### 1.1 Background

Background information goes here

## 2 USING THE STYLE TEMPLATE

- Note that each author needs to have a separate entry in author footer on the bottom-left corner of the first page, merging two people (even if from the same institution) is not permitted.
- The style uses the hyperref package, thus turns references into internal links. We thus recommend to make use of the “`\autoref{reference}`” call (instead of “`Figure~\ref{reference}`” or similar) since “`\autoref{reference}`” turns the entire reference into an internal link, not just the number. Examples: Fig. 2 and Table 1.
- The style automatically looks for image files with the correct extension (eps for regular L<sup>A</sup>T<sub>E</sub>X; pdf, png, and jpg for pdfL<sup>A</sup>T<sub>E</sub>X), in a set of given subfolders (figures/, pictures/, images/). It is thus sufficient to use “`\includegraphics{CypressView}`” (instead of “`\includegraphics{pictures/CypressView.jpg}`”).

- Roy G. Biv is with Starbucks Research. E-mail: roy.g.biv@aol.com.
- Ed Grimley is with Grimley Widgets, Inc.. E-mail: ed.grimley@aol.com.
- Martha Stewart is with Martha Stewart Enterprises at Microsoft Research. E-mail: martha.stewart@marthastewart.com.

Manuscript received xx xxx. 201x; accepted xx xxx. 201x. Date of Publication xx xxx. 201x; date of current version xx xxx. 201x. For information on obtaining reprints of this article, please send e-mail to: reprints@ieee.org. Digital Object Identifier: xx.xxx/TVCG.201x.xxxxxxx

- For adding hyperlinks and DOIs to the list of references, you can use “`\bibliographystyle{abbrev-doi-hyperref-narrow}`” (instead of “`\bibliographystyle{abbrev}`”). It uses the doi and url fields in a bib<sub>T</sub>E<sub>X</sub> entry and turns the entire reference into a link, giving priority to the doi. The doi can be entered with or without the “`http://dx.doi.org/`” url part. See the examples in the bib<sub>T</sub>E<sub>X</sub> file and the bibliography at the end of this template.

**Note 1:** occasionally (for some L<sup>A</sup>T<sub>E</sub>X distributions) this hyper-linked bib<sub>T</sub>E<sub>X</sub> style may lead to **compilation errors** (“pdfendlink ended up in different nesting level ...”) if a reference entry is broken across two pages (due to a bug in hyperref). In this case make sure you have the latest version of the hyperref package (i.e., update your L<sup>A</sup>T<sub>E</sub>X installation/packages) or, alternatively, revert back to “`\bibliographystyle{abbrev-doi-narrow}`” (at the expense of removing hyperlinks from the bibliography) and try “`\bibliographystyle{abbrev-doi-hyperref-narrow}`” again after some more editing.

**Note 2:** the “-narrow” versions of the bibliography style use the font “PTSansNarrow-TLF” for typesetting the DOIs in a compact way. This font needs to be available on your L<sup>A</sup>T<sub>E</sub>X system. It is part of the “paratype” package, and many distributions (such as MikTeX) have it automatically installed. If you do not have this package yet and want to use a “-narrow” bibliography style then use your L<sup>A</sup>T<sub>E</sub>X system’s package installer to add it. If this is not possible you can also revert to the respective bibliography styles without the “-narrow” in the file name.

DVI-based processes to compile the template apparently cannot handle the different font so, by default, the template file uses the abbrev-doi bibliography style but the compiled PDF shows you the effect of the abbrev-doi-hyperref-narrow style.

### 3 BIBLIOGRAPHY INSTRUCTIONS

- Sort all bibliographic entries alphabetically but the last name of the first author. This  $\LaTeX$ /bib $\TeX$  template takes care of this sorting automatically.
- Merge multiple references into one; e. g., use [?, ?] (not [?] [?]). Within each set of multiple references, the references should be sorted in ascending order. This  $\LaTeX$ /bib $\TeX$  template takes care of both the merging and the sorting automatically.
- Verify all data obtained from digital libraries, even ACM's DL and IEEE Xplore etc. are sometimes wrong or incomplete.
- Do not trust bibliographic data from other services such as Mendeley.com, Google Scholar, or similar; these are even more likely to be incorrect or incomplete.
- Articles in journal—items to include:
  - author names
  - title
  - journal name
  - year
  - volume
  - number
  - month of publication as variable name (i. e., {jan} for January, etc.; month ranges using {jan #{/}# feb} or {jan #{-}# feb})
- use journal names in proper style: correct: “IEEE Transactions on Visualization and Computer Graphics”, incorrect: “Visualization and Computer Graphics, IEEE Transactions on”
- Papers in proceedings—items to include:
  - author names
  - title
  - abbreviated proceedings name: e. g., “Proc.\ CONF\_ACRONYM” without the year; example: “Proc.\ CHI”, “Proc.\ 3DUT”, “Proc.\ Eurographics”, “Proc.\ EuroVis”
  - year
  - publisher
  - town with country of publisher (the town can be abbreviated for well-known towns such as New York or Berlin)
- article/paper title convention: refrain from using curly brackets, except for acronyms/proper names/words following dashes/question marks etc.; example:
  - paper “Marching Cubes: A High Resolution 3D Surface Construction Algorithm”
  - should be entered as “{M}arching {C}ubes: A High Resolution {3D} Surface Construction Algorithm” or “{M}arching {C}ubes: A high resolution {3D} surface construction algorithm”
  - will be typeset as “Marching Cubes: A high resolution 3D surface construction algorithm”
- for all entries
  - DOI can be entered in the DOI field as plain DOI number or as DOI url; alternative: a url in the URL field
  - provide full page ranges AA--BB
- when citing references, do not use the reference as a sentence object; e. g., wrong: “In [?] the authors describe ...”, correct: “Lorensen and Cline [?] describe ...”

### 4 RELATED WORK

### 5 ALGORITHM

### 6 RESULTS

Data was gathered from the user studies to determine whether Body Talk would be viable in other applications. All 7 Oregon State University students who took part in these user studies were able to make models they felt accurately depicted their body shape. On a 1 to 5 scale, the average student gave their generated model a 4 on how closely the model resembled them. These results show that Body Talk could indeed be useful in generating realistic body types from words (students used sliders for each word in the interface).

However, aside from these impressive stats, the students gave the word descriptions generated from their models a 3.6 out of 5 on whether they believed the words described their body types accurately. This score is okay but not great like the previous score. This is no surprise because Body Talk generated around 6 - 16 words for different models. With that many body type descriptions generated, there is bound to be some words that a student just won't agree with. Rightfully so, some of the word traits would probably not match their body types at all. Aside from Body Talk generating inaccurate body type word descriptions, it also generated very accurate ones as well. This would result in a higher score for this test. But just because a student gives a high score, it doesn't mean that it is accurate data. For example, a student may get a “fit” word description generated by body talk based off the model the student made of themselves. Even if the person really isn't fit, the student may like to see this trait anyways. Because the program gave them a positive trait, they will give the test a higher score resulting in inaccurate data. The same thing can happen the other way around. A student may find a bad trait that may be true but they don't like, so they give the test a lower score than it should be. All these factors most likely played a factor in the user tests which led to a passable average score.

### 7 FUTURE WORK

Can include improvements to user studies (ex. set time, more participants, more generated models, more tests)
